Fraud Prevention and Liability Guidelines

1. Liability Shift: For EMV (chip) card transactions, liability for counterfeit fraud shifts to the party that does not support EMV. For online transactions (Card Not Present), liability generally rests with the merchant unless 3D Secure was used.

2. 3D Secure: Transactions authenticated with 3D Secure (e.g., Verified by Visa, Mastercard Identity Check) shift the liability for fraud-related chargebacks from the merchant to the issuer.

3. Red Flags: Merchants should monitor for red flags such as: multiple failed payment attempts, mismatch between billing and shipping address, expedited shipping on high-value items, and unusually large orders.

4. Account Takeover (ATO): If a customer claims 'Unauthorized Transaction' due to account takeover, the platform will investigate IP logs, device fingerprints, and recent password changes.

5. Risk Scoring: Merchants with a risk score above 7.0 are subject to additional scrutiny. Transactions over $1000 from high-risk merchants may require manual review before settlement.

6. Cryptocurrency Payments: Cryptocurrency transactions are final and irreversible. Claims regarding crypto payments must be resolved directly between the buyer and seller, except in cases of proven platform error.
